

Red Canyon & plateau edge / snow through the year16

OCTOBER FOCUS / EXPLORATORY SATELLITE CONTEXT + NOAA STATION NORMALS

OCTOBER / typical monthly snow cover

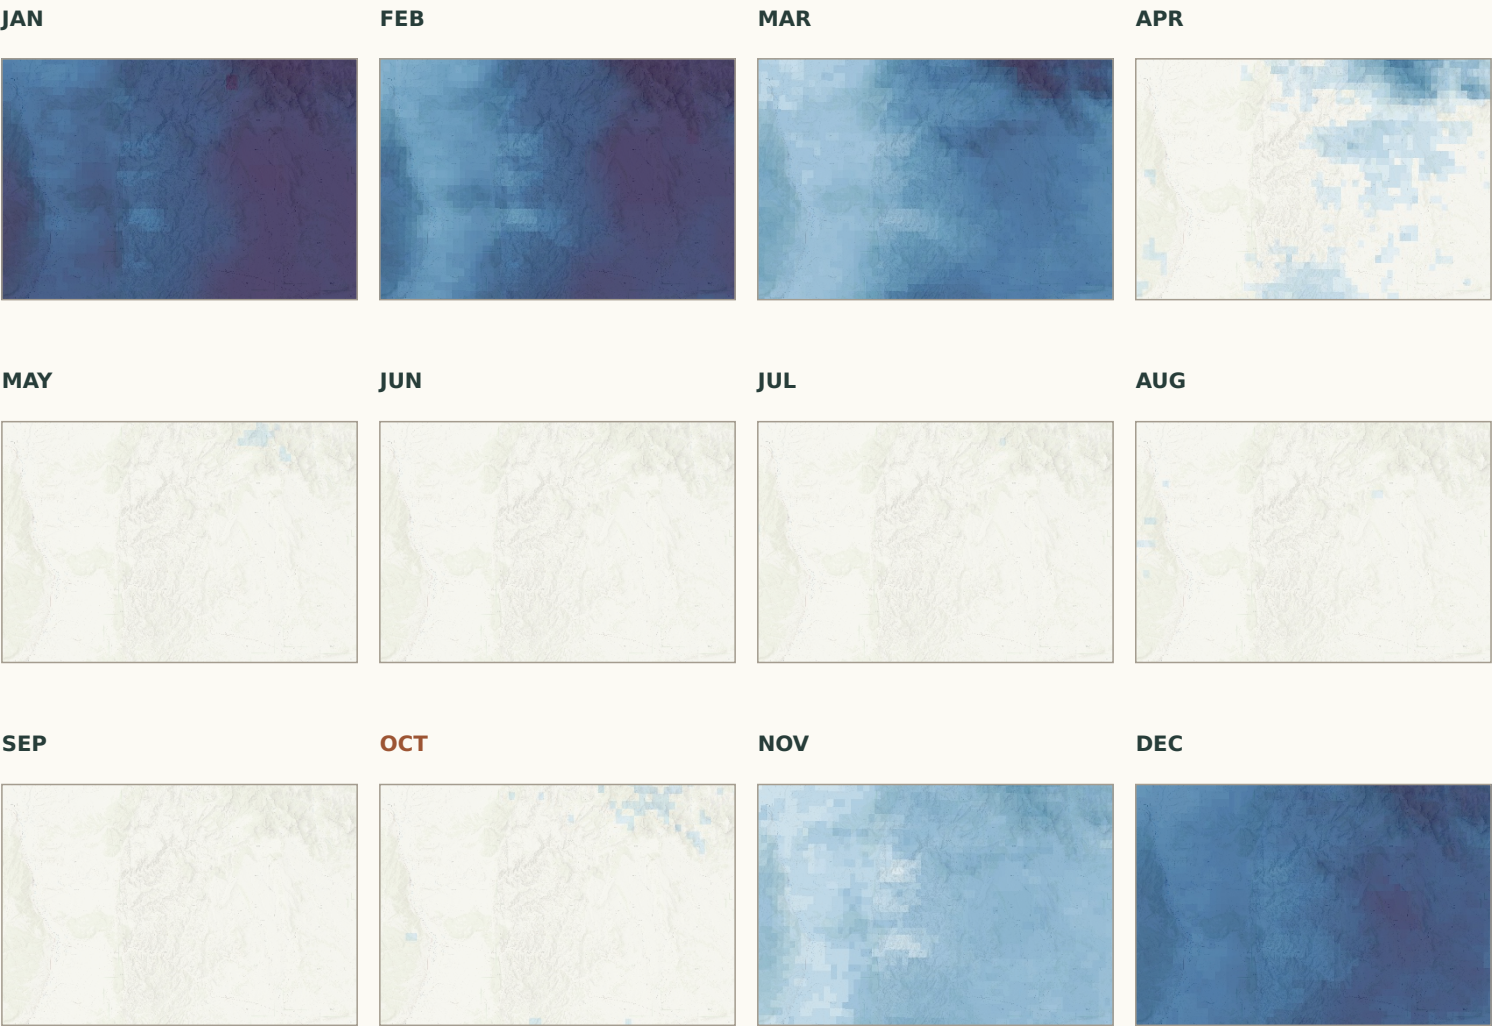

Nominal 500m cells; ESA input 1km. DLR 2000-2025; ESA through 2023. Average of source medians; method partly unreproduced. Not snow depth or a daily/trip probability. Zero typical cover does not mean no snow. Not locally validated; small summer patches may be artifacts.

NEARBY STATIONS / MONTHLY NEW SNOWFALL (INCHES), 1991-2020

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	OCT 15: depth >=1in
Kodachrome / 5,805ft	5.9*	5.2	2.3	1.5	0.2	0.0	0.0	0.0	0.0	0.2	1.5*	6.9*	Kodachrome: 0.1% (29 years)
Bryce NP HQ / 7,890ft	19.8*	18.1	13.2*	5.9	1.5	0.2	0.0	0.0	0.0	3.0	9.7*	15.3*	Bryce NP HQ: 3.3% (28 years)

Station probabilities: smoothed 29-day calendar window around Oct 15; not trip odds. Nearby stations can lie outside these map frames.
* Provisional normal (<24 complete years); months/flags in source data. Elevation alone cannot predict snow on a shaded or exposed trail.
