

COJUP DESCENT · BACKTRACK AND CONTINUATION

North-up route map · your reported cliff encounter near the -9.420 latitude gridline

Recorded route Attempted descent Backtrack Westward continuation

Terrain: Copernicus GLO-30 (~30 m), not LiDAR. Amber: modeled slope 35–45°; red shading: $\geq 45^\circ$. Contours in meters.

Cliffs ahead are your field observation. Shading does not identify cliff edges, and unshaded terrain does not establish safe passage.

Distances follow the GPS trace and include recording noise. WGS84 / UTM 18S · EGM2008 terrain heights · North is up on both plan views.

THE REVERSAL AND ALTERNATIVE LINE

- 1 Descended toward the turnaround along the orange line.
- 2 Reversed near -9.41939 , -77.38886 and retraced ~283 m.
- 3 Turned west, then southwest, along the purple continuation. The recorded continuation passes west of the attempted line. The full remaining route is shown at left; the GPS trace supports the change of route, but does not locate the cliff face itself.

BACKTRACK AREA · FOUR VIEWS OF THE ROUTE CHANGE

Near -9.420 latitude · 2 = turnaround; 3 = westward turn after retracing. Reported cliff edge remains unmapped.

FROM NORTHWEST

..... Recorded route Attempted descent Backtrack Westward continuation

Equal horizontal / vertical scales; no exaggeration. Colored route drawn over the surface for visibility from all angles.

30 m satellite terrain, not LiDAR. The route change is recorded; the model cannot confirm the cliff boundaries you avoided.

COJUP VALLEY · THE REST OF YOUR RECORDED DESCENT

Route from Huapi Pass to the end of the recording; the turnaround is marked for context.
