The Canoe Traveller's Network

The instructor's key / Ordinary tandem team / Double carries / Model assumptions, not observed travel times

---

I. THREE PRE-DESIGNED JOURNEYS

A - Inner circuit / 13.25-27.25 h

Clearwater - West Pike - Pine - Little Caribou - Caribou - Clearwater

B - Eastern circuit / 19.5-40.75 h

Clearwater - West Pike - East Pike - John - Little John - McFarland
Pine - Little Caribou - Caribou - Clearwater

C - Rose out and back / 17.25-33.25 h

Clearwater - Mountain - Watap - Rove - Rose; return by the same chain

Totals are moving + handling hours, not days or daily targets.
Rest, camps, queues, difficult weather and windbound waits add time.
Both directions use the same broad scenario envelope; wind direction
changes which end of the range is plausible.

II. HOW THE HOURS ARE RECKONED

Paddle: geographic water-path distance, plus 15-30% indirect travel;
20-35% on more winding paths. Divide by 4 km/h (favourable) or
2 km/h (adverse but travelable). These are teaching assumptions.

Carry: 2 loaded walks at 2-3 km/h, 1 return at 3-4 km/h,
plus 10-20 minutes of handling per connection. One rod = 5.0292 m.

Bounds round outward to quarter hours. A 0-0.25 h label means
a brief nonzero leg. All rod counts are derived, not official counts.

III. READING THE SPARSE CHART

Each lake has at most one pair of time pies:
the longest modeled landing-to-landing crossing.
Left = shorter time; right = longer time.
A full black disc = one fixed 15-hour period.
Its exact endpoint pair is recorded in the layer
and the table below. Shorter crossings may take
less time. A lake without pies has no modeled
crossing. All alternatives remain in the register.

Bent carries echo recorded trail geometry. Small
IDs identify them; rods are kept in the CSV.
No inference should be made from an absent link.

Landmark leaders associate a feature with a lake,
not a measured sight line. Water-visible features
have published lake-view evidence. (walk) marks
waterfalls reached on foot, not a canoe sighting.

Landmark coordinates and viewing descriptions
are in the geographic project and LANDMARKS.md.
Generic DEM summit candidates are hidden there;
they are not shown as visible landmarks here.

IV. THE HYPOTHETICAL EXERCISE

S marks the Clearwater departure. The three
original trips remain in the key. Extra lakes widen
the study area; they do not certify a through-route.
All time ranges are scenarios, not predictions.
The diagram cannot supply bearings or distances.

SOURCES & REPRODUCTION

MN DNR waters / USFS trails / published lake views
Friends of BWCA digitized loop / Parks Canada history
Sources: docs/SOURCES.md and docs/LANDMARKS.md
Assumptions and original geometry are bundled.
