A DRAUGHT OF THE EASTERN LAKES

The Canoe Traveller's Network

80 eastern lakes / Shapes remembered; time emphasized / A modern hypothetical exercise

THE RECKONING

Each pair shows the shorter estimate (left) and longer estimate (right). Black fills clockwise through a fixed 15-hour period. Lake pies: longest modeled crossing. Carry pies: double-carry travel + handling. Exact hours remain in the instructor register. White = zero; full black = 15 hours. No pie = no estimate. This daylight-length unit is an assumption, not a seasonal forecast.

0 1/4 1/2 3/4 1

*(walk) = visit on foot. * = approximate passage. Dashed = water link. Deliberately distorted; no scale. Windbound waits are extra.*
